

Terms of Acceptance

When a woman seeks the benefits of the Webster In Utero Constraint Technique and we accept a patient for such care it is essential for both to be working towards the same objective.

Chiropractic has only one goal. It is important that each patient understand the objective and the method that will be used to attain it. This will prevent any confusion or disappointment.

Adjustment: An adjustment is the specific application of a force to facilitate the body's correction of vertebral subluxation. Our chiropractic method of correction is by specific adjustments of the spine.

Vertebral Subluxation: A misalignment of one or more of the 24 vertebrae in the spinal column which causes alteration of nerve function. This results in interferences to the transmission of mental impulses, leading to a decrease in the body's overall, healthy performance.

The tense muscles in the pelvis, caused by misalignment in the sacrum may lead to constraint in the uterus. When the uterus is torqued and constrained in this manner, it is more difficult for the baby to move into the best possible position for birth. The Webster Technique is a specific chiropractic adjustment which corrects subluxation in the sacrum. As a result, the mother's tense pelvic muscles and ligaments relax, enhancing the physiological environment needed for normal baby positioning.

We do not offer to diagnose or treat any condition. We are not turning malpositioned babies. We do not determine baby position. Our only practice objective is to eliminate a major interference to the expression of the body's innate wisdom. Our method is detection of and specific adjusting of vertebral subluxation.

I have read and fully understand the above statements.
All questions regarding the doctor's objectives pertaining to my care in this office have been answered to my complete satisfaction.
I therefore accept chiropractic care on this basis.
